PROPANE BAR-B-QUE OPERATING INSTRUCTIONS

OPERATION

1. Big John products are designed FOR OUTDOOR USE ONLY.
2. Prior to opening main cylinder valve, and lighting grill, place all control knobs in the "CLOSED" position (turned to the left).
3. Open main cylinder valve. Hold a lit butane gun next to a burner and turn the burner control knob to "OPEN" (pointing at you). The burner will ignite instantly. The second burner in each section will instantly light by simply turning it on. Since each section is ignited separately, only light the section required.

Please Note: If flame is not strong enough, you will need to restart the BBQ by first turning off all burner valves, then turning off propane tank. Check to make sure that the regulator is securely fastened to the propane tank, and there are no leaks in the line going to the BBQ. Wait 30 seconds, then open propane tank before opening any burner valves. Then light one burner at a time.

4. Once burners are lit, adjust the control knobs to desired temperature.
5. When finished cooking close all control knobs, close main cylinder valve and disconnect propane cylinder.
6. Clean grates with non-metallic pad or rag while grates are still hot. DO NOT USE A WIRE BRUSH ON STAINLESS STEEL GRATES.
7. Bar-B-Ques returned NOT cleaned will be subject to \$40 cleaning charge.
